The data monitoring platform includes welding terminal data acquisition system and cloud data intelligent management system. Real-time collection, processing and analysis of on-site welding construction parameters, such as welding current, welding voltage, welding layer information, wire feeding speed and welding speed, etc.

It can realize the intelligent collection of welding construction parameters, record analysis, and abnormal alarm. Through industrial wireless network and industrial Ethernet technology, it can realize the collection and transmission of field data and remote and cloud management, forming a large database of welding construction, improving management efficiency, and forming traceability Construction chain.

Through secondary development, it can also be used for on-site monitoring and remote management in other fields.

Technical Parameters

No.	Name	Parameters
1	Working voltage	80~260VAC
2	Transmission distance	Maximum 280m (open line of sight, 8dbi antenna) or 4G network transmission
3	Scan gun	wired
4	Data collection	Current, voltage, temperature between layers
5	Composition	Built in sensor, AD acquisition module, WiFi module, etc
6	Working environment	-20~50°C, Humidity10%~90% RH (no condensation)
7	Protection level	IP67
8	Data protection	Double data protection mechanism, automatic network resuming
